

for a greener tomorrow

SMART CONDITION MONITORING

for Predictive Maintenance

- **Reliable online machine monitoring**
- **Easy startup with Plug&Play**
- **Flexible and expandable system**
- **Ideal for monitoring motors, gearboxes, pumps and fans**

Smart Condition Monitoring

Manufacturers need to respond to global competition and sourcing. Therefore, there is a need to look for solutions based on reducing cost, eliminating risks, improving system design and helping to manage maintenance to maximize reliable production. Condition monitoring offers a predictive approach to plant maintenance ensuring optimum asset performance, whilst keeping downtime to a minimum.

PLUG & PLAY solution SMC KIT

Mitsubishi Electric has built on the Smart Condition Monitoring a solution named SCM Kit using the advanced FAG SmartCheck sensors for monitoring.

The SCM Kit is a pre-configured plug-and-play solution delivered with multi-language touch operator interface and one vibration sensor.

The bi-directional data flow from multiple sensors is transferred over Ethernet to the integrated smart sensor controller for in-depth monitoring and more detailed analysis and information. This information can be redirected to higher level systems via network or telemetric remote services. Adaption of local external parameters is supported and can be linked via the sensor controller to the sensors for more precise analysis, like speed information from a motor.

Up to six sensors can be added to machines via the touch interface intuitively. With a simple teach function allowing the sensor and controller to learn the normal operating state of the machine.

Once set up, the SCM Kit provides 24/7 online monitoring of each asset and real-time alarms give the operator information about the type of condition. The clear text information includes advice for service and maintenance staff and the integrated statistical information indicate a developing problem on an individual machine and support a optimization of better maintenance and reduce the life-cycle cost.

Holistic Approach

To optimize maintenance activities it is crucial to have up to date visibility of the status of machinery including primary assets and services such as motors, fans, pumps, compressors and gearboxes.

Mitsubishi Electric offers this capability through its integrated solutions collecting live data from advanced measurement sensors for analysis by multiple levels of management systems enables a holistic approach.

Standard Monitoring

Increases in operating temperature, excessive current draw, changes in vibration characteristics and significant shifts in other operating parameters can all be indicative of impending problems in rotating machines.

Advanced Monitoring

Condition monitoring based on vibration analysis was once the province of experts work, but the introduction of SCM with smart sensors revolutionised condition monitoring.

The SCM solution monitors online the full range of parameters and complements 'traffic light' alerts with detailed diagnostics after a status change and vibration patterns out of the norm in the application and offers for non-experts in-depth analysis and recommendations for actions to minimize unscheduled downtime and maximize asset availability. The maintenance can be scheduled in advance for key assets more effectively and generate significant reductions in losses, optimizing asset lifecycle management.

Easy mounting of the SmartCheck sensor unit with a screw on top of the motor or gear box and connecting with a single cable due to Power over Ethernet (PoE) technology

Operating Benefits

The SCM analysis provides detailed diagnostics and more precise error identification with identifying the root cause and even recommendations as to what rectification actions should be taken.

- **Predictable maintenance**
Plannable service month before breakdown
- **Reliable online monitoring**
Patented sensor diagnosis
- **Intelligent process monitoring**
Recording parameters in correlation with vibration signals
- **Easy and intuitiv startup**
Plug&Play solution pre-configured
- **Intuitive operation**
Automatic adjustment of alarm thresholds
- **Long term storage of historical data**
Root cause analysis
- **Flexible, expandable system**
Stand-alone or network system for new or existing applications
- **Full service around machine diagnosis**
Supporting remote and cloud services

Functionalities

Mitsubishi Electric's Smart Condition Monitoring system supports a number of functions that aid in predictive maintenance

- Bearing defect detection
- Imbalance detection
- Misalignment detection
- Lack of lubricant detection
- Temperature measurement
- Cavitation detection
- Phase failure recognition
- Resonance frequency detection
- Trend of damage development
- Clear text status messages

Target Applications

The Smart Condition Monitoring system overcomes the limitations of traditional sensors. The Smart Condition Monitoring system provides an improved solution for all rotating application with bearings:

- Electric and geared motors
- Fluid and vacuum pumps
- Ventilators and fans
- Gearboxes
- Compressors

Application examples

Waste Water Plant

Three Archimedes-Screw pumps with gear box, redundant, SCM Kit and three sensor, analog speed values, telemetric access and access point for SCADA. Break down of the gear box in a time frame of 1–3 years.

Detected failure

Four months after installation gear wheel defect detected

Costs

Overhaul of gear box: €1,000
New gear box: €5,500
Saving €4,500

SCM solution cost:

Hardware: €4,700
Installation: €1,000

Installation by Mitsubishi Electric partner

Sugar Plant

Four gear boxes at a sugar beetwashing machine, SCM Kit-1 COMPACT with four sensors. Buffer time during stop is 10 minutes.

Costs

6 hour unplanned stoppage à €60,000 during Champaign mode (€360,000)
1.5 hour stoppage with scheduled maintenance (€90,000)
Saving: €270,000

SCM solution cost:

Hardware: €5,000
Installation: €3,000

Installation by System Integrator supported by Mitsubishi automation partner

The Smart Condition Monitoring Kit-1 COMPACT

Simple decision. The SCM Kit-1 COMPACT is one of our SCM solutions and offers outstanding value and reduces costly downtime. It is a completely pre-configured condition monitoring solution for new or existing applications with one vibration sensor and is optionally expandable with up to six sensors.

SCM KIT-1 COMPACT	PART NO.
Compact control cabinet H×W×D: 30×30×21 cm incl. SmartCheck-Kit pre-configured SmartCheck sensor #1 with 10 m Ethernet PoE connecting cable, expandable with up to six sensors. Mounting with M6 screw connection Integral programmable sensor controller for data processing and external signal handling Integral 4.3" operating display for visualisation and parameter adjustment PoE switch for data signals and sensor power supply	290578
OPTIONAL FOR EXPANSION:	
FAG SmartCheck – preconfigured Kit sensor #2	298547
FAG SmartCheck – preconfigured Kit sensor #3	298548
FAG SmartCheck – preconfigured Kit sensor #4	298549
FAG SmartCheck – preconfigured Kit sensor #5	298550
FAG SmartCheck – preconfigured Kit sensor #6	298551
Ethernet cable 10 m for SCM Kit sensor	271188
Ethernet cable 20 m for SCM Kit sensor	271189
Ethernet cable 30 m for SCM Kit sensor	298545
Ethernet cable 50 m for SCM Kit sensor	297286
FAG SmartCheck SPM mounting adapter M8/M6	271184
